

Clothes Moths Treatment Prep Sheet

Important: Clean, wash, and vacuum all areas before treatment is applied. Vacuum bags should be discarded immediately upon completion.

DO NOT WASH IMMEDIATELY AFTER TREATMENT.

General:

1. Remove everything from the closets, bureaus, dressers, and other areas where the moths have been seen.
2. All clothes, curtains, and bed linens should be laundered or steam cleaned if possible. If clothes are already clean; a cycle through the dryer will prevent reintroduction of pests after the treatment. Fine fabrics that cannot be washed are recommended to be dry cleaned.
3. Remove all items on the top of the beds and couches and clear out the surrounding areas around them.
4. Furniture should be pulled away from the edges of the rooms about one foot.
5. There should be a clear path of access for the technician to inspect and treat any areas where the pests have been seen.
6. Any harborage areas (stored items) should be removed from the areas to be sprayed before treatment to eliminate any areas for the pests to hide and allow enough space for the technician to safely perform the treatment.

PLEASE DO NOT:

1. Do not use any cleaning agents around the treatment area, if you need to clean areas that have been treated, use a vacuum, or dry sweep for at least 30 days. The product will last 30 – 60 days.
2. Do not "bomb" or "spray" anything after you have been treated.

PRECAUTION: When insecticide treatments are applied to enclosed areas or continuously occupied living or working spaces, people should vacate for 2 - 4 hours. Pets should vacate for 4 hours. Pregnant women, children under 2 years of age, and people with respiratory problems or health concerns should vacate for 6 hours and consult their doctor. Pet birds should be out for 24 hours. Fish aquariums, please unplug from the wall and cover with a sheet or plastic.

****PREGNANT WOMEN AND CHILDREN AGED 2 YEARS AND YOUNGER MUST VACATE FOR 6 HOURS****
